The Vengeance Producer Suite - Avenger v1.2.2 can help you to produce any type of music, be it electronic, rock, dance, or classical. It is a powerful software with an intuitive interface that enables you to create your mix in an innovative way. The GUI has four color-coded levels so that the user's needs are easily met without too much difficulty in understanding the interactions between their MIDI devices and software settings. Avenger is a MIDI and audio sequencer and much more. It's a powerful software with an intuitive interface and enables you to create your mix in an innovative way. The GUI has four color-coded levels so that the user's needs are easily met without too much difficulty in understanding the interactions between their MIDI devices and software settings. If you're looking for a tool to help you plan your compositions, record your tracks, or mix down, this is the tool for you. - You can record audio and MIDI performance. You can even record your own sound files and add them to your audio track in the sequencer itself. - 10 different modulation, FX and time effect sources with modulation, mod wheel and pitch bend controls. - 60+ of the most popular instruments ready to play! - New Cubase 5 compatible VST plugins: VSTi Instruments - Voice Changer, Drum Synth, SFZ Sampler, WOW effects/synth/drum machine etc.. - VSTi Effects - Compressor/Limiter, 3D/Ping Pong Delay ... - VST effects from the Cubase 5 project's FX rack. - You can load and use your own VST plugins. - Seamless looping - You can set the loop range to any time position. - New Feature: Pitch Bend Sensitivity - When the track is in record mode, press [Pitch Bend] from your MIDI keyboard and change from -24 semitones to 0 semitones, while you play the keyboard. This way you can change the performance's pitch modulation while recording! - New Feature: Modulation Wheel Sensitivity - When a track is in record mode, press [Modulation Wheel] from your MIDI keyboard and change from 0 to 100%, while you play the keyboard. This way you can change the performance's modulation while recording! - Transpose function - While the track is in record mode, you can transpose the performance up and down while playing keyboard. - Record and overdub operations - you can change the settings while recording, after recording and while overdubbing. - You can copy and paste samples by clicking [Copy] or [Paste]. - You can export your recorded performances to various file formats (Wave, MP3), including cubase sampler presets. - MIDI timing grid - click on the main window's title bar to activate/deactivate it.
